INFORMATION

IMAnalytics

IMAnalytics' condition control streamlines your production and maintenance planning. The system is optimized to monitor rotating machines. Different industrial applications and requirements are met in the alternatives Easy and Advance.

Thanks to a user-friendly interface and automatic alarms and analyzes, troubleshooting is both simple and fast. All results are available in a browser or smartphone.

The functions are tailored to the user's needs and their individual routines.

IMA EASY

Easy installation with wireless sensors building a mesh network. Measures the overall vibration levels and temperature.

Cost efficient and easy!

IMA ADVANCE

For critical that requires early detection of errors so proactive maintenance can be done. Suitable for both slow and fast rotating machinery as well as variable speed machines.
