

Environmental policy

Nomo Kullager AB is one of Scandinavia's leading companies in sliding and rolling bearings, transmissions, seals and related services. The company has strong technical skills and high level of service.

We are a company with activities involving import, stocking, sales and distribution of the above mentioned products.

We will increase our employees insights and understanding of environmental issues in order to jointly reduce our environmental impact.

We promote sustainable development and work with continuous improvements.

We shall prevent pollution and try to reduce the impact of the external environment. We will strive to reduce emissions from travelling in connection with missions since this is a major part of our climate impact.

We strive to use only renewable electricity.

We want to reduce the friction of our customers, which means less energy consumption and lower CO2 emissions.

We recycle and sort waste as far as possible and take care of all environmentally hazardous waste.

We will have an environmentally oriented purchasing behavior of goods and services that promotes a sustainable society.

We comply with the laws and other requirements imposed on us from authorities, customers and the market.

We are responsible to continually evaluate, monitor and reduce the environmental impact by effectively using our environmental management system that meets the requirements of ISO 14001.

Nomo
